

## Chemicals that Can Damage Plastics

Dear Valued Customer,

Please be aware that certain chemicals have specific reactions with plastics. Below is a list of chemicals that cause damage to acrylic and polycarbonate plastics. Do not use any cleaning fluids that contain any of the below table of chemicals on any plastic product.

This should also include any other products other than LED Autolamps' products.

### IMPORTANT

**LED Autolamps (AUST) Pty Ltd will not approve any Warranty Claims received and will not be responsible for damage to any of its products which have come into contact with any chemicals listed in the tables below.**

| Chemicals That Will Damage Acrylic Lenses |
|---|
| Acetaldehyde Aq.                          |
| Acetic Acid Aq.                           |
| Acetone                                   |
| Alcohols, Aliphatic                       |
| Amyl Acetate                              |
| Anillne                                   |
| Benzene                                   |
| Butyric Acid Aq.                          |
| Butyric Acid                              |
| Chlorosulphonic Acid Aq.                  |
| Chromic Acid Aq.                          |
| Citric Acid Aq.                           |
| Ethyl Acetate                             |
| Ethylene Glycol Aq.                       |
| Formic Acid Aq.                           |
| Hydrofluoric Acid Aq                      |
| IMS 100                                   |
| Methyl Ethyl Ketone                       |
| Sulphuric Acid Aq.                        |
| Transformer Oil                           |
| Xylene                                    |
|   |
|   |
|   |

| Chemicals That Will Damage Polycarbonate Lenses |
|---|
| Acetic Acid Aq.                                 |
| Acetone   |
| Ammonium Carbonate Aq.                          |
| Ammonium Chloride Aq.                           |
| Benzene   |
| Calcium Hypochlorite                            |
| Chloroform                                      |
| Chromic Acid Aq.                                |
| Ethyl Acetate                                   |
| Ethylene Glycol Aq.                             |
| Formaldehyde Aq.                                |
| Citric Acid                                     |
| Heptane   |
| Hydrofluoric Acid Aq                            |
| IMS 100   |
| Lubricating Oils (Petroleum)                    |
| Methyl Ethyl Ketone                             |
| Methyl Chloride                                 |
| Mineral Oils                                    |
| Oleic Acid                                      |
| Ozone   |
| Phosphoric Acid Aq.                             |
| Toluene   |
| Turpentine                                      |
| Zinc Chloride Aq.                               |
